continuous system simulation by françois e. cellier - continuous system modeling - francois e cellier, av francois e cellier, continuous system modeling introduces the student to an important subclass of continuous system simulation francois e cellier, **mathematical modeling of physical systems** - system dynamics approach to modeling soft-science systems was that a function of multiple variables can be written as a product of functions of a single variable each: • this is obviously not generally true, and forrester of course knew it. he made this assumption simply because he didn't know how else to proceed. $birth_rate = population \cdot f(\text{pollution, food, crowding, material_standard} \dots$
